The sequence contained an oligo-dr track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand connown and therefore this may represent a bonafide poly A
tail. cDNA Library Preparation: M.B. Soares Lab Clone distribution:
clones will be available through Research Genetics (www.resgen.com)
The following repetitive elements were found in this cDNA sequence:
1-36, >AT_rich#Low_complexity 84-105, >AT_rich#Low_complexity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /u__xrel__uran_londer_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_colour_c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      library from which this clone was derived, please visit our web site at ratest.eng.ulowa.edu. The subtraction has been previously described in (Bonaldo, Lennon and Soares, Genome Research 6:791-806, 1996)
Eukaryota, Métazoa, Chordata, Craniata, Vertebrata, Euteleostomi,
Mammalia, Eutheria, Rodentia, Sciurognathi, Muridae, Murinae;
                                                                                                                                                                                                     1 (bases 1 to 680)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description
